

## SCHMETZ Point Shapes for Household Sewing Machine Needles

Slightly rounded point

Slightly rounded point with special taper

Medium ball point SUK

Acute round point

Light ball point

Twist point LL

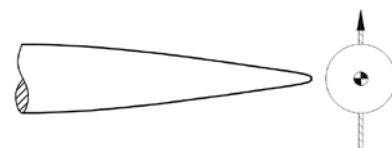

**SCHMETZ**

## Slightly rounded point

The slightly rounded point is the standard point shape for household sewing machine needles. This point shape is qualified for trouble-free sewing of most materials and many applications.

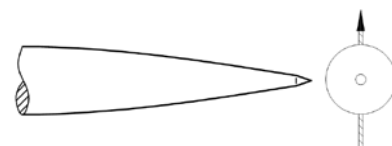

- For:
- Universal Needle 130/705 H
  - Super Universal Needle 130/705 H-SU
  - Topstitch Needle 130 N
  - (Quick Threading Needle 705 HDK)
  - Embroidery Spring Needle 130/705 H SPR
  - Metallic Needle 130 MET
  - Double Eye Needle 705 DE
  - (Hemstitch Needle 130/705 H WING)

## Acute round point

This is a slim, acute point shape, useful for accurate piercing of densely woven and coated materials. It creates an exact seam appearance with straight stitches and helps to reduce seam puckering.

For: Microtex Needle 130/705 H-M

## Slightly rounded point with special taper

The slim point with special taper to the slightly rounded point easily penetrates thick layers of fabric/batting and avoids material damages. It is the best point shape for quilting and patchwork.

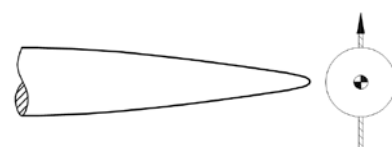

For: Quilting Needle 130/705 H-Q

## Light ball point

This point shape displaces woven and knitted threads, directly piercing the spaces between the threads. Therefore it avoids material damages. This is the best point shape for embroidery.

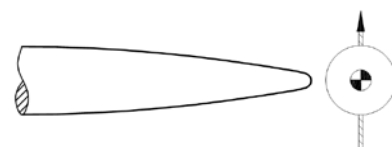

- For:
- Embroidery Needle 130/705 H-E
  - Gold Embroidery Needle 130/705 H-ET

## Medium ball point SUK

The medium ball point is more rounded than a light ball point. Therefore it can be used for coarser knitwear, for material containing Lycra/Spandex and it is also very suitable for medium to heavy denim.

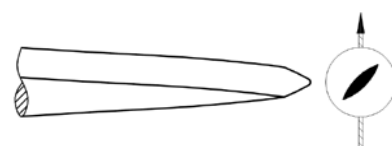

- For:
- Jersey Needle 130/705 H SUK
  - Stretch Needle 130/705 H-S
  - Super Stretch Needle HAx1 SP
  - Jeans Needle 130/705 H-J

## Twist point LL

This cutting point has a lens-shaped cross-section and the incision is made at an angle to the direction of the seam. It provides easier penetration of leather and leather-like materials. This point shape creates a decorative stitch slightly inclined towards the left (in household machines which are threaded from the front).

For: Leather Needle 130/705 H LL
