

SCHMETZ Super Stretch Needle System HAx1 SP

Super Stretch Needle NM 75 / size 11

SCHMETZ

The SCHMETZ Super Stretch Needle has a **special flat shank** which allows the needle to be closer to the hook. Additionally, the **special design of the scarf area** produces a larger needle thread loop which can easily be picked up by the hook. These features prevent skip stitches even on highly elastic fabrics.

The **reinforced blade** causes less needle breakage and creates straighter stitches.

As a result of the **wider and shorter eye** in combination with the **widened groove** the HAx1 SP is able to sew with thicker sewing threads than the Universal or the Stretch Needle. The threads are less stressed and do not break.

The HAx1 SP has a **medium ball point** which is suitable for all kinds of knits because it displaces the meshes, avoiding damage to the material.

Instead of nickel, this needle has a **chrome coating** which makes it more resistant against wear.

The **white coloured ring** at the shoulder of the Super Stretch Needle helps to simply and quickly identify this needle as Special Needle.

New: The SCHMETZ Super Stretch Needle HAx1 SP is now available in size 65/9 for super fine stretch fabric, e.g. with microfibre. Moreover, the needle is also available in size 75/11, 90/14, and assorted.

The Super Stretch Needle can be used in all home sewing machines which require needle system 130/705 H, as well as in some overlock machines (information on that can be found in your machine manual). Due to its properties the HAx1 SP is an alternative to the Stretch Needle when sewing with thicker sewing threads.
